

# Building Agentic Workflows with MCP on Amazon Bedrock

Vivek Raja & Avinash Dalvi

# Does LLM solve every single AI problem?

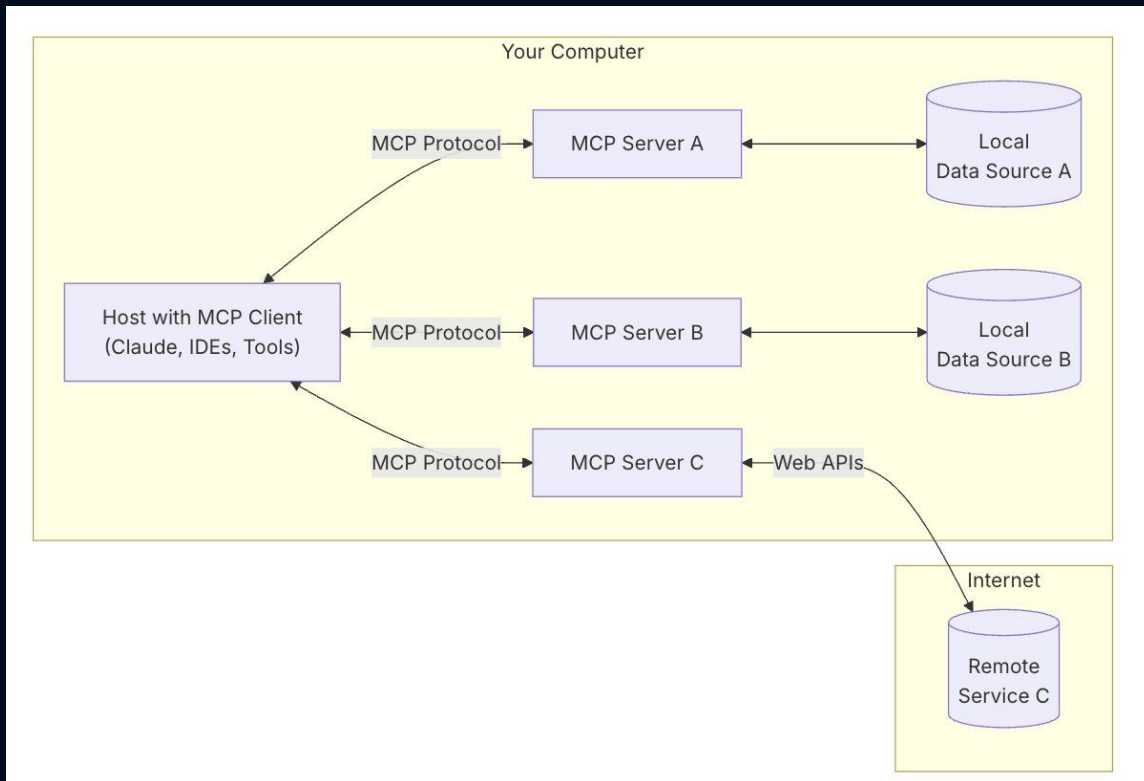

# What is Model Context Protocol (MCP)?

Model Context Protocol (MCP) is a standard protocol (created by Anthropic) that lets AI agents talk to external tools and data sources in a unified, plug-and-play way.

# Understanding MCP Architecture

# Understanding MCP Architecture

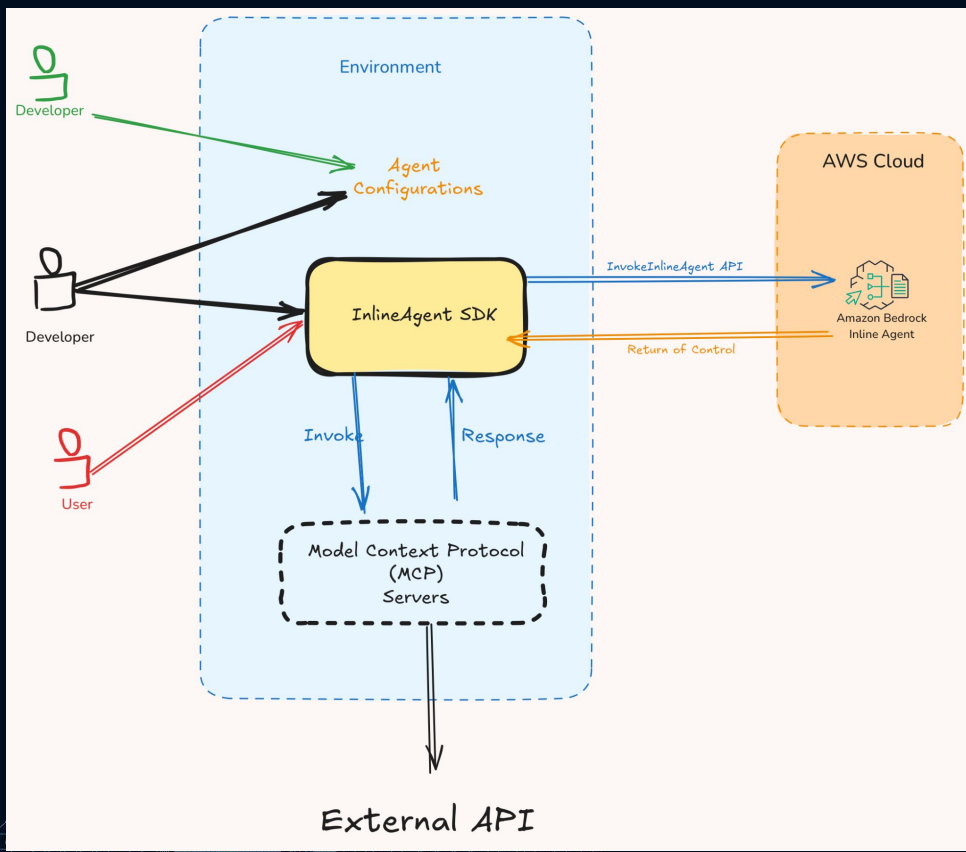

I just define an execution plan:

- get\_issues\_from\_jira
- summarize\_by\_owner
- classify\_priority
- generate\_weekly\_report

Each of those steps is fulfilled by a different capability exposed via MCP. The agent reads the plan, makes decisions, and delegates work — cleanly.

# Using MCP with Amazon Bedrock Agents

# To Summarize...

“MCP is an open protocol that standardizes how applications provide context to LLMs. Think of MCP like a USB-C port for AI applications. Just as USB-C provides a standardized way to connect your devices to various peripherals and accessories, MCP provides a standardized way to connect AI models to different data sources and tools.” - Anthropic
